# 1. What is Buffswap?

## Mission

BuffSwap's mission is to add value to play-to-earn (P2E) platforms, providing a ready-made bridge solution between virtual assets and blockchain.

BuffSwap Bridge is dedicated to gaming platforms, where the players are not able to swap their virtual prizes and assets into real value.

For the investors who stake their tokens, the BuffSwap platform will provide staking reward from the tournament's pool. Our platform will on one hand allow users to have fun, and on the other, provide users with two potential income streams. The first one being a play-to-earn model the second one being a passive and dividend-based model, rewarding those who participate in the platform development.

## Value

Given the pace of growth and development of the gaming and esports market, as well as the decentralized billing model based on blockchain, the potential value of the project is vast.

Who can earn on the BuffSwap?

1. Players who use the platform
  - Swap your any virtual assets to \$BUFFS tokens
2. Investors who hold BuffSwap tokens
  - Trade \$Buffs token on PancakeSwap
3. Holders who stake BuffSwap tokens
  - Stake \$BUFFS tokens and earn passive income

## Purpose of the platform

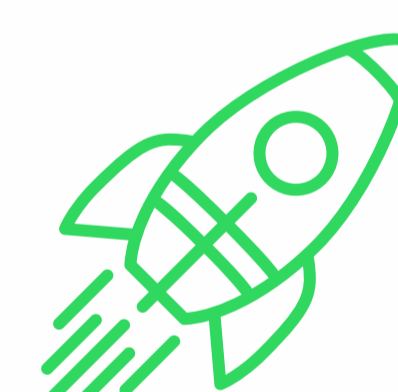

BuffSwap's purpose is to launch a number of tools dedicated to one of the fastest growing categories of the web – gaming. There are two key goals which are scaling processes and adapting processes based on blockchain.

### 1. BuffSwap Bridge Platform

Launching our own platform to provide dedicated esports, gaming and crypto gaming services.

### 2. API\_BuffSwap

Providing and promoting a set of API (Application Programing Interface) tools for installation in other applications, systems and platforms. This strategy would assist in boosting user acquisitions for the BuffSwap platform.

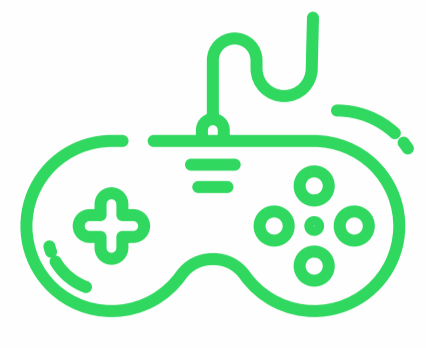

## Future

To provide an open API mechanism for multi-platform billing which will contribute to the full automation of payment and settlement processes in the fastest growing markets

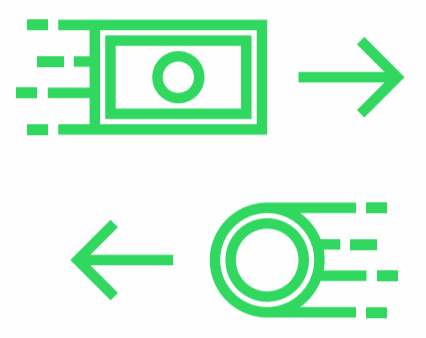

1. Cryptocurrencies
2. E-Sports
3. Gaming

#### Play-To-Earn

BuffSwap Bridge Cooperates With Gaming Tournament Platforms. Every Player Will Have The Possibility To Earn Prizes From Tournaments In \$BUFFS Tokens Instead Of Collecting Virtual Assets That Hold No Possibility Of Converting Them Into Real Value.

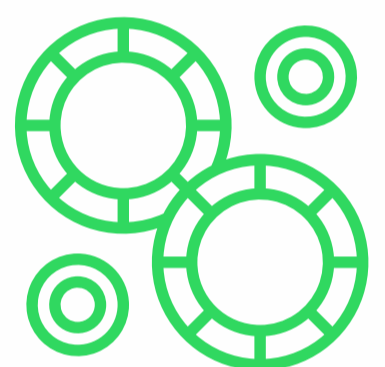

#### Swap

Swap Virtual Assets From Your Gaming Platform To \$BUFFS Tokens. Keep Your Assets In Real Value

#### Passive Income

Stake Your \$BUFFS Tokens And Earn Passive Income. The Transaction Fees In \$BUFFS Tokens Go To Stakers.

#### Deflationary Token

Every Swap From Virtual Assets To \$Buffs Tokens Burns Part Of The Tokens Which Increases The Value Of Them.

## 2. Service delivery model

### The Platform

In the first phase, we are focused on providing players a bridge platform, which enables to swap various virtual assets to \$BUFFS tokens.

The data for the games will be uploaded to BuffSwap using Oracle Chainlink, a decentralized platform which verifies the authenticity of data.

The second phase will entail the launching of a BuffSwap API which will enable us to adapt to various systems, platforms and applications of other projects with the aim of increasing the scalability of our project. This will increase the value of our platform and boost brand awareness.

### Service delivery - an example

Players who use the partnered platform will be able to swap the different virtual assets into \$BUFFS tokens, which can be traded on the DEX Pancakeswap.

### The value of BuffSwap - the system for Hodlers

Owners of BuffSwap tokens can participate in staking. This option allows investors to stake their tokens and consequently to be paid a share of the profit in proportion to their share of the pool.

The profit sharing system is not only transparent and fair, but also calculated by a smart contract. The staker himself can choose to withdraw his funds and have it returned to his original wallet.

This process will be accounted for by a smart contract. The same mechanism is used by the biggest swap platforms, such as UniSwap.

# 3. Platform Launch - Bridge

## Play2Earn

BuffSwap is the world's first decentralized Play2Earn platform - that connects billions of gaming enthusiasts and crypto investors, providing the API (Buff token technology and economics) to many websites with virtual assets and gaming platforms.

In this way, external projects will adapt and embed our technology and solutions into their projects and operations.

The more users, the greater your profit!

## Alpha version

The alpha version of the bridge platform has been prepared for immediate launch with all the legal recommendations being considered and implemented.

## Platform

The official gaming platform developed and managed by BuffSwap aims to be launched in Q1 2023. It holds much intellectual and technical value which will introduce several innovative tools that will add new benefits and additional value to the gaming industry and cryptocurrency markets.

---

## Functionality:

### Gaming and Tournaments

The choice of games will be imported by the Oracle Chainlink from leading gaming platforms

### Crypto data

The token information for all associated gaming platforms will be imported from leading trading platforms and CMS systems.

### BuffSwap Tools

Option for hodlers who want to stake their \$BUFFS on the platform to receive a percentage of the platform's profits.

### BuffSwap Swap

BuffSwap platform uses smart contracts to guarantee the transparency of token transfers and the payment of dividends

# 4. Strategy

## How do we implement a dynamic development strategy?

BuffSwap will provide the API (Buff token technology and economics) to many websites with virtual assets and gaming platforms.

In this way, external projects will adapt and embed our technology and solutions into their projects and operations.

Once the above is achieved, we will automatically gain access to scale, that is, users who already have the experience and interest in virtual values (tokens).

### The business opportunity and market for which we are developing our solution

There are more than 10,000 websites and more than 600 gaming platforms available which are using virtual assets. A few of the bigger ones to mention are:

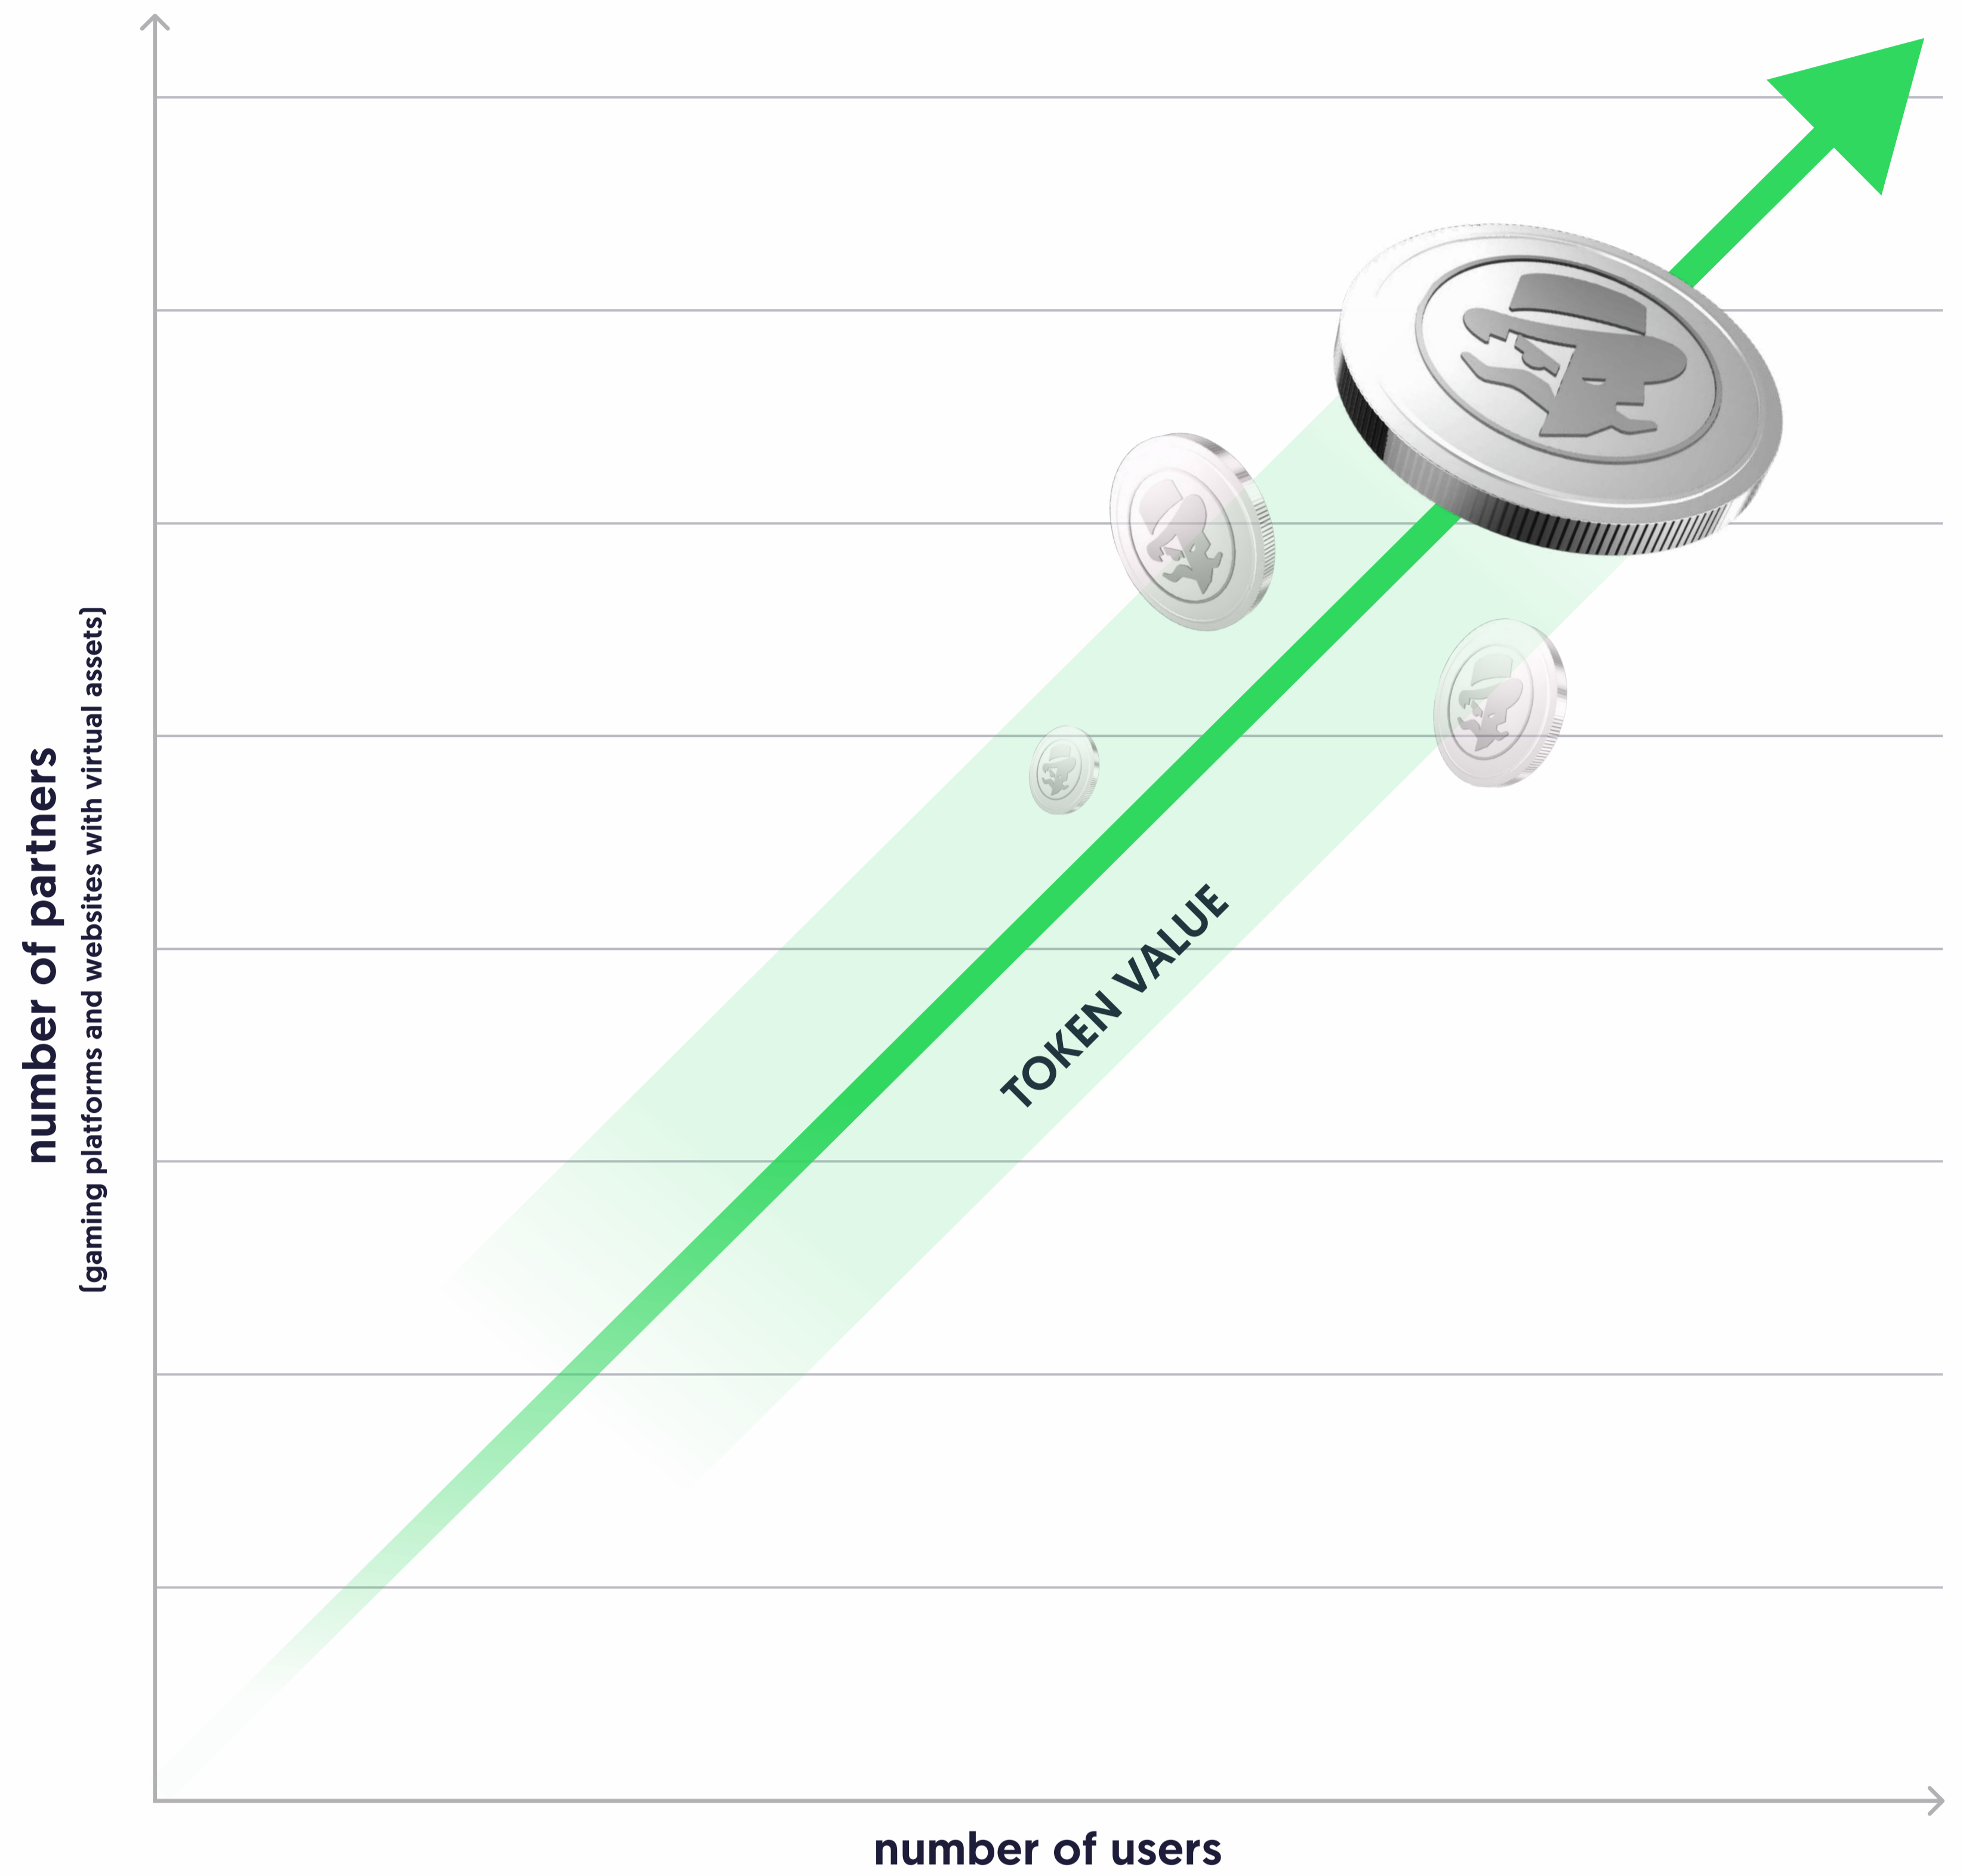

- PayBack
- FACEIT
- Challengermode

There are constantly new platforms being created for mobile games that are looking for partners that provide additional values in the crypto world. Mobile game developers are also an important part of this, with more than 3,000 companies releasing up to 50,000 titles a year.

To summarize, the strategy of the BuffSwap project is to quickly adapt the technology and to implement the usability of the token on other platforms.

The process of the API implementations for websites and gaming platforms is already in progress.

Join our journey today!

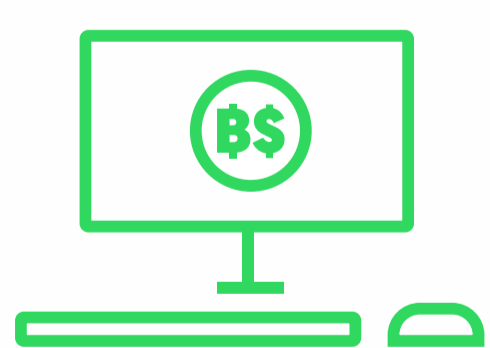

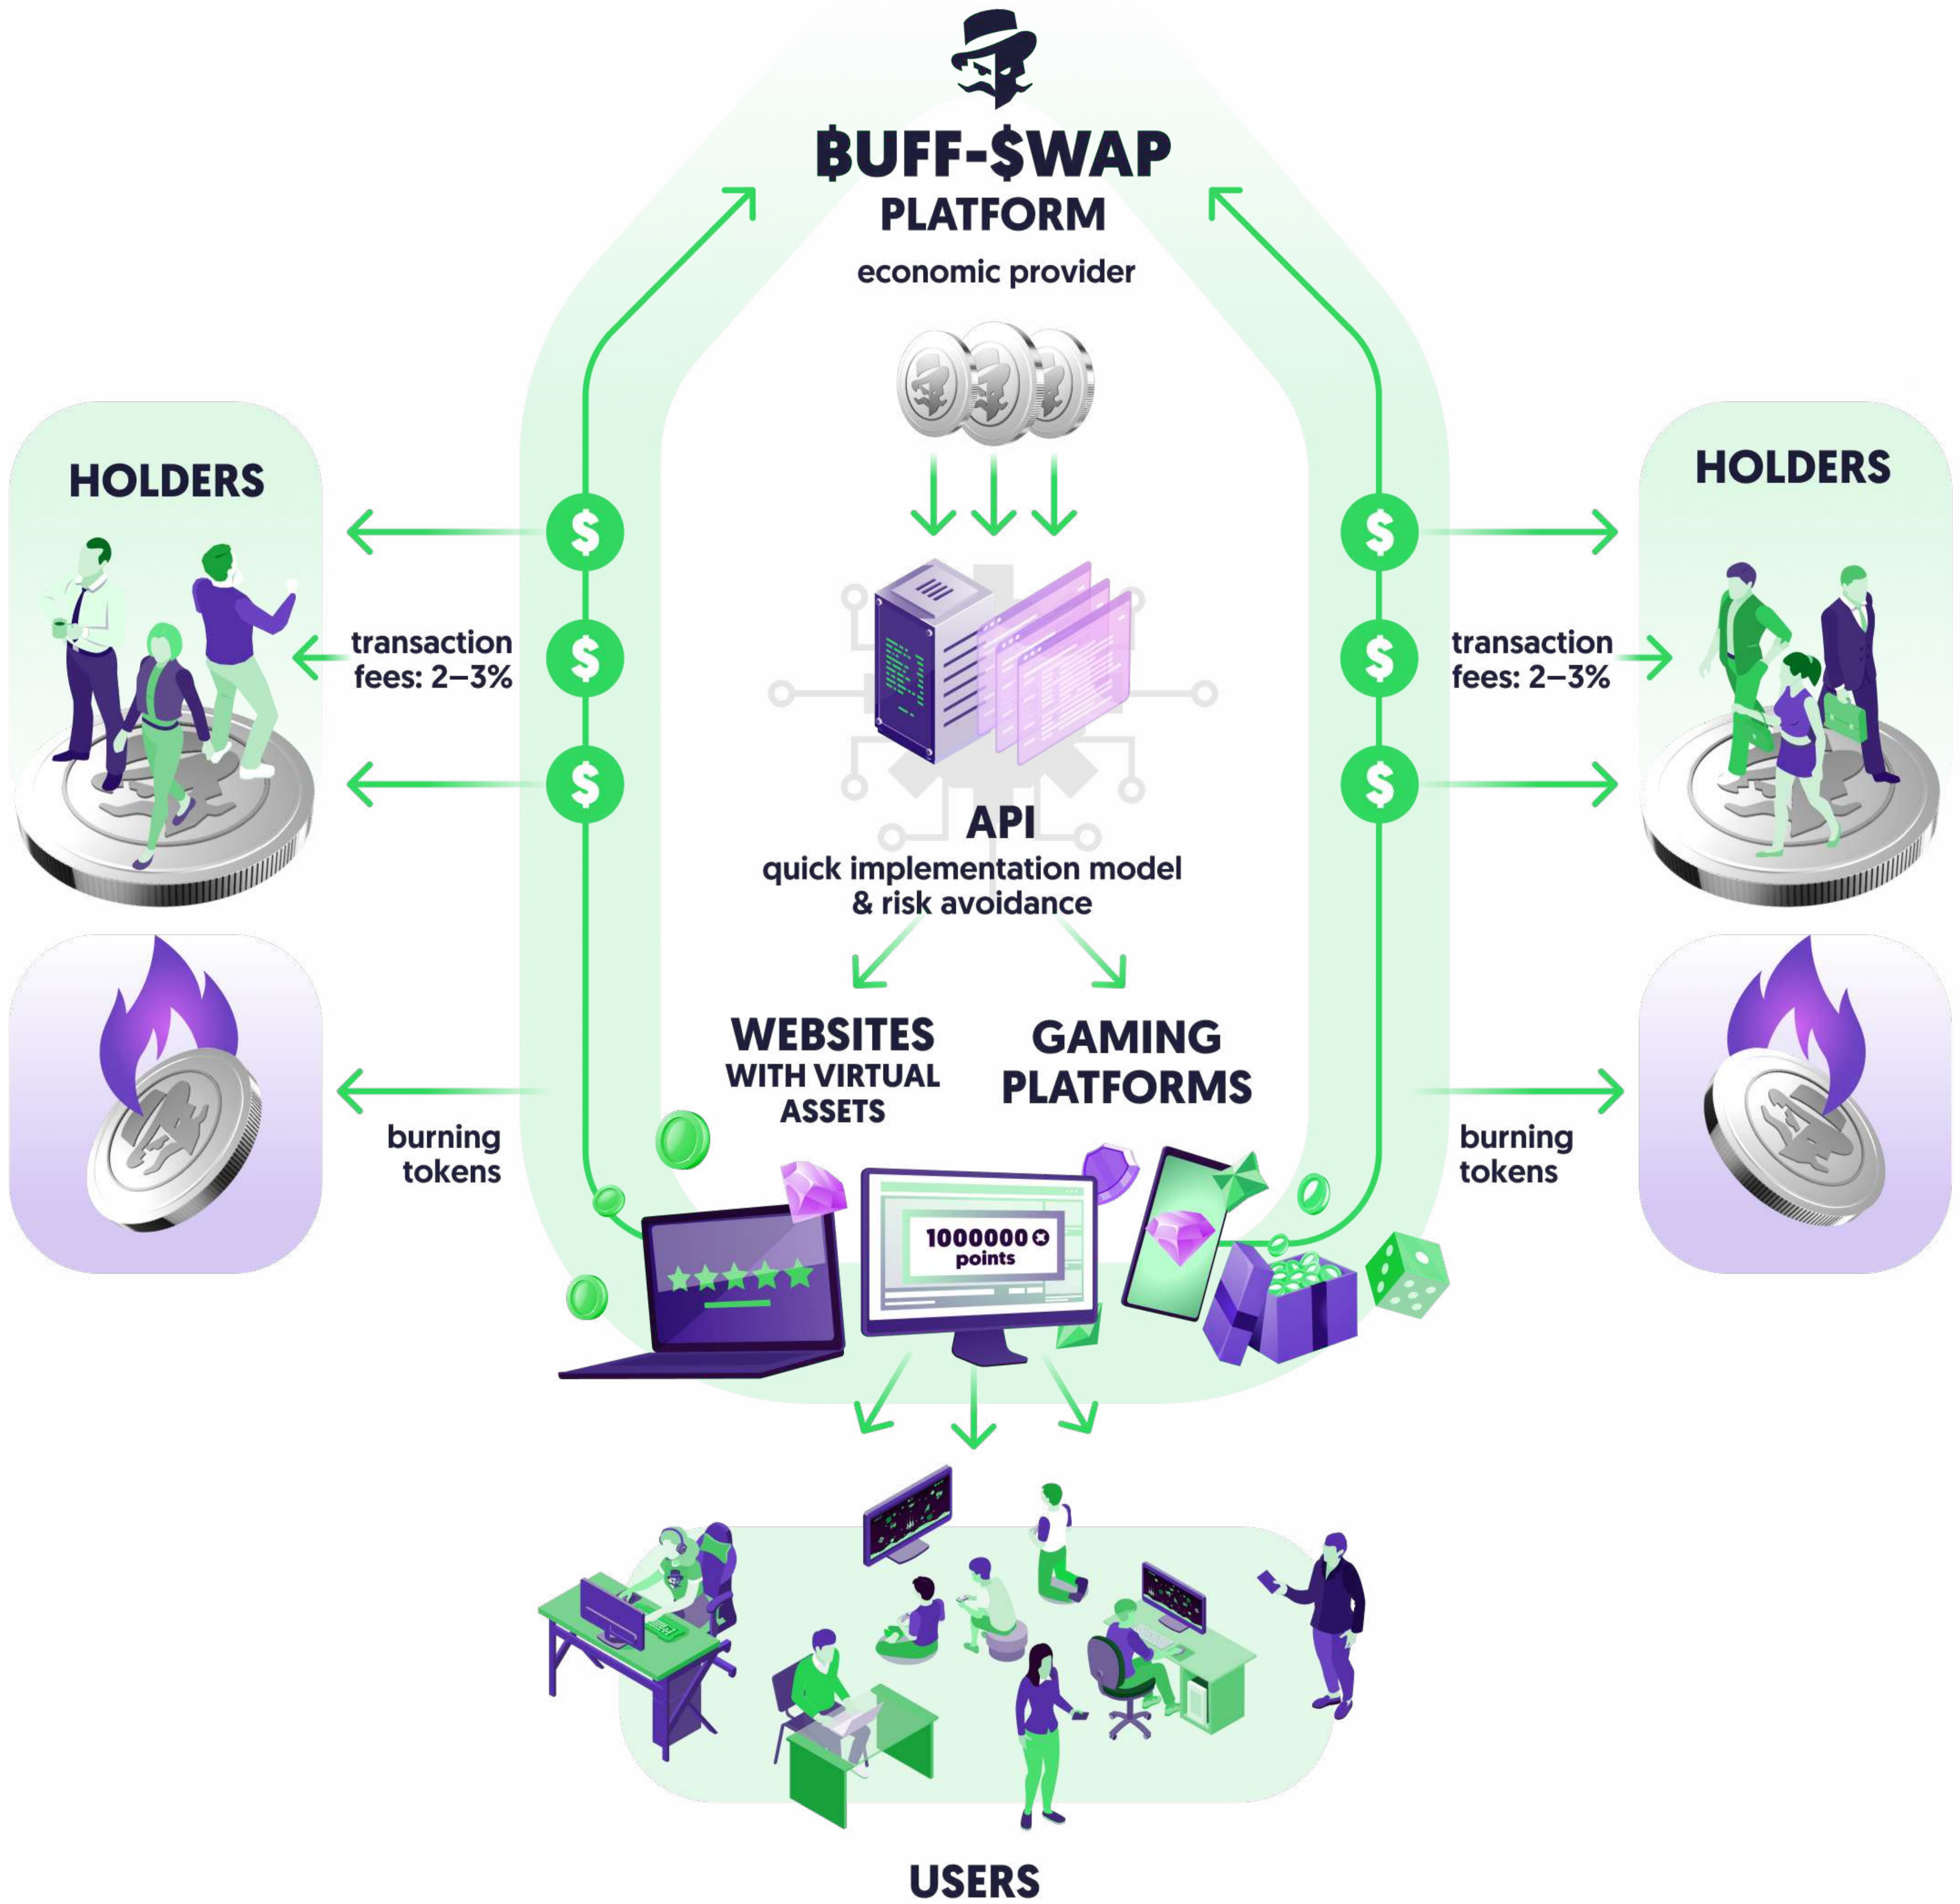

## The development strategy for BuffSwap

An important part of the development strategy of any project are the DYNAMICS, i.e. the rapid development of the platform and the number of users using the platform.

# 5. Strategy diagram

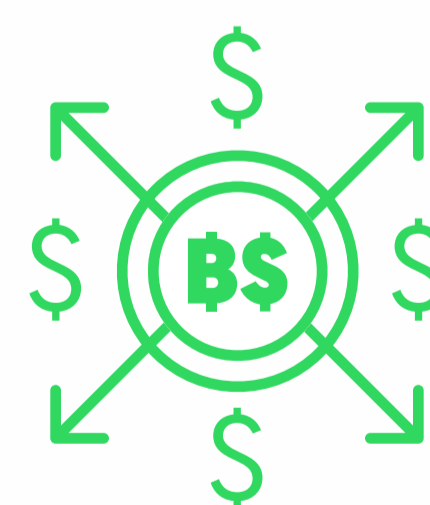

### Our Gaming Platform

The team behind BuffSwap is also in the process of creating a gaming platform that will serve as a project example of how the solution can be used.

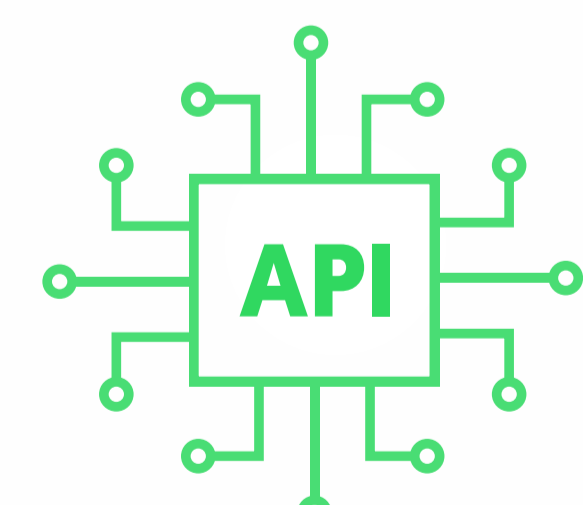

### Why BuffSwap?

The API implementation process is provided for any platforms with a cryptocurrency adoption alongside legal advice.

### Virtual BuffSwap Tokens

The suggested model of token value building via staking and democratic profit sharing (each BuffSwap token generates an equal percentage in the profits) is innovative and in combination with smart contracts, guarantees fairness and transparency.

### API Implementation

Any platform using virtual assets can implement the Virtual Buffs tokens which are exchangeable on Buffswap.io

## 6. Token details

Official Logo

### Token metrics

Name: BuffSwap (BUFFS) token

SYMBOL: BUFFS

DECIMALS: 4

Ethereum (ETH) ERC20 utility / Binance Smart Chain (BSC)

Total Supply 100.000.000 closed collections

ERC-20 Token Adress: 0x140B890BF8e2FE3E26fcD516c75728fB20b31c4f

BSC Token Adress:0x140B890BF8e2FE3E26fcD516c75728fB20b31c4f

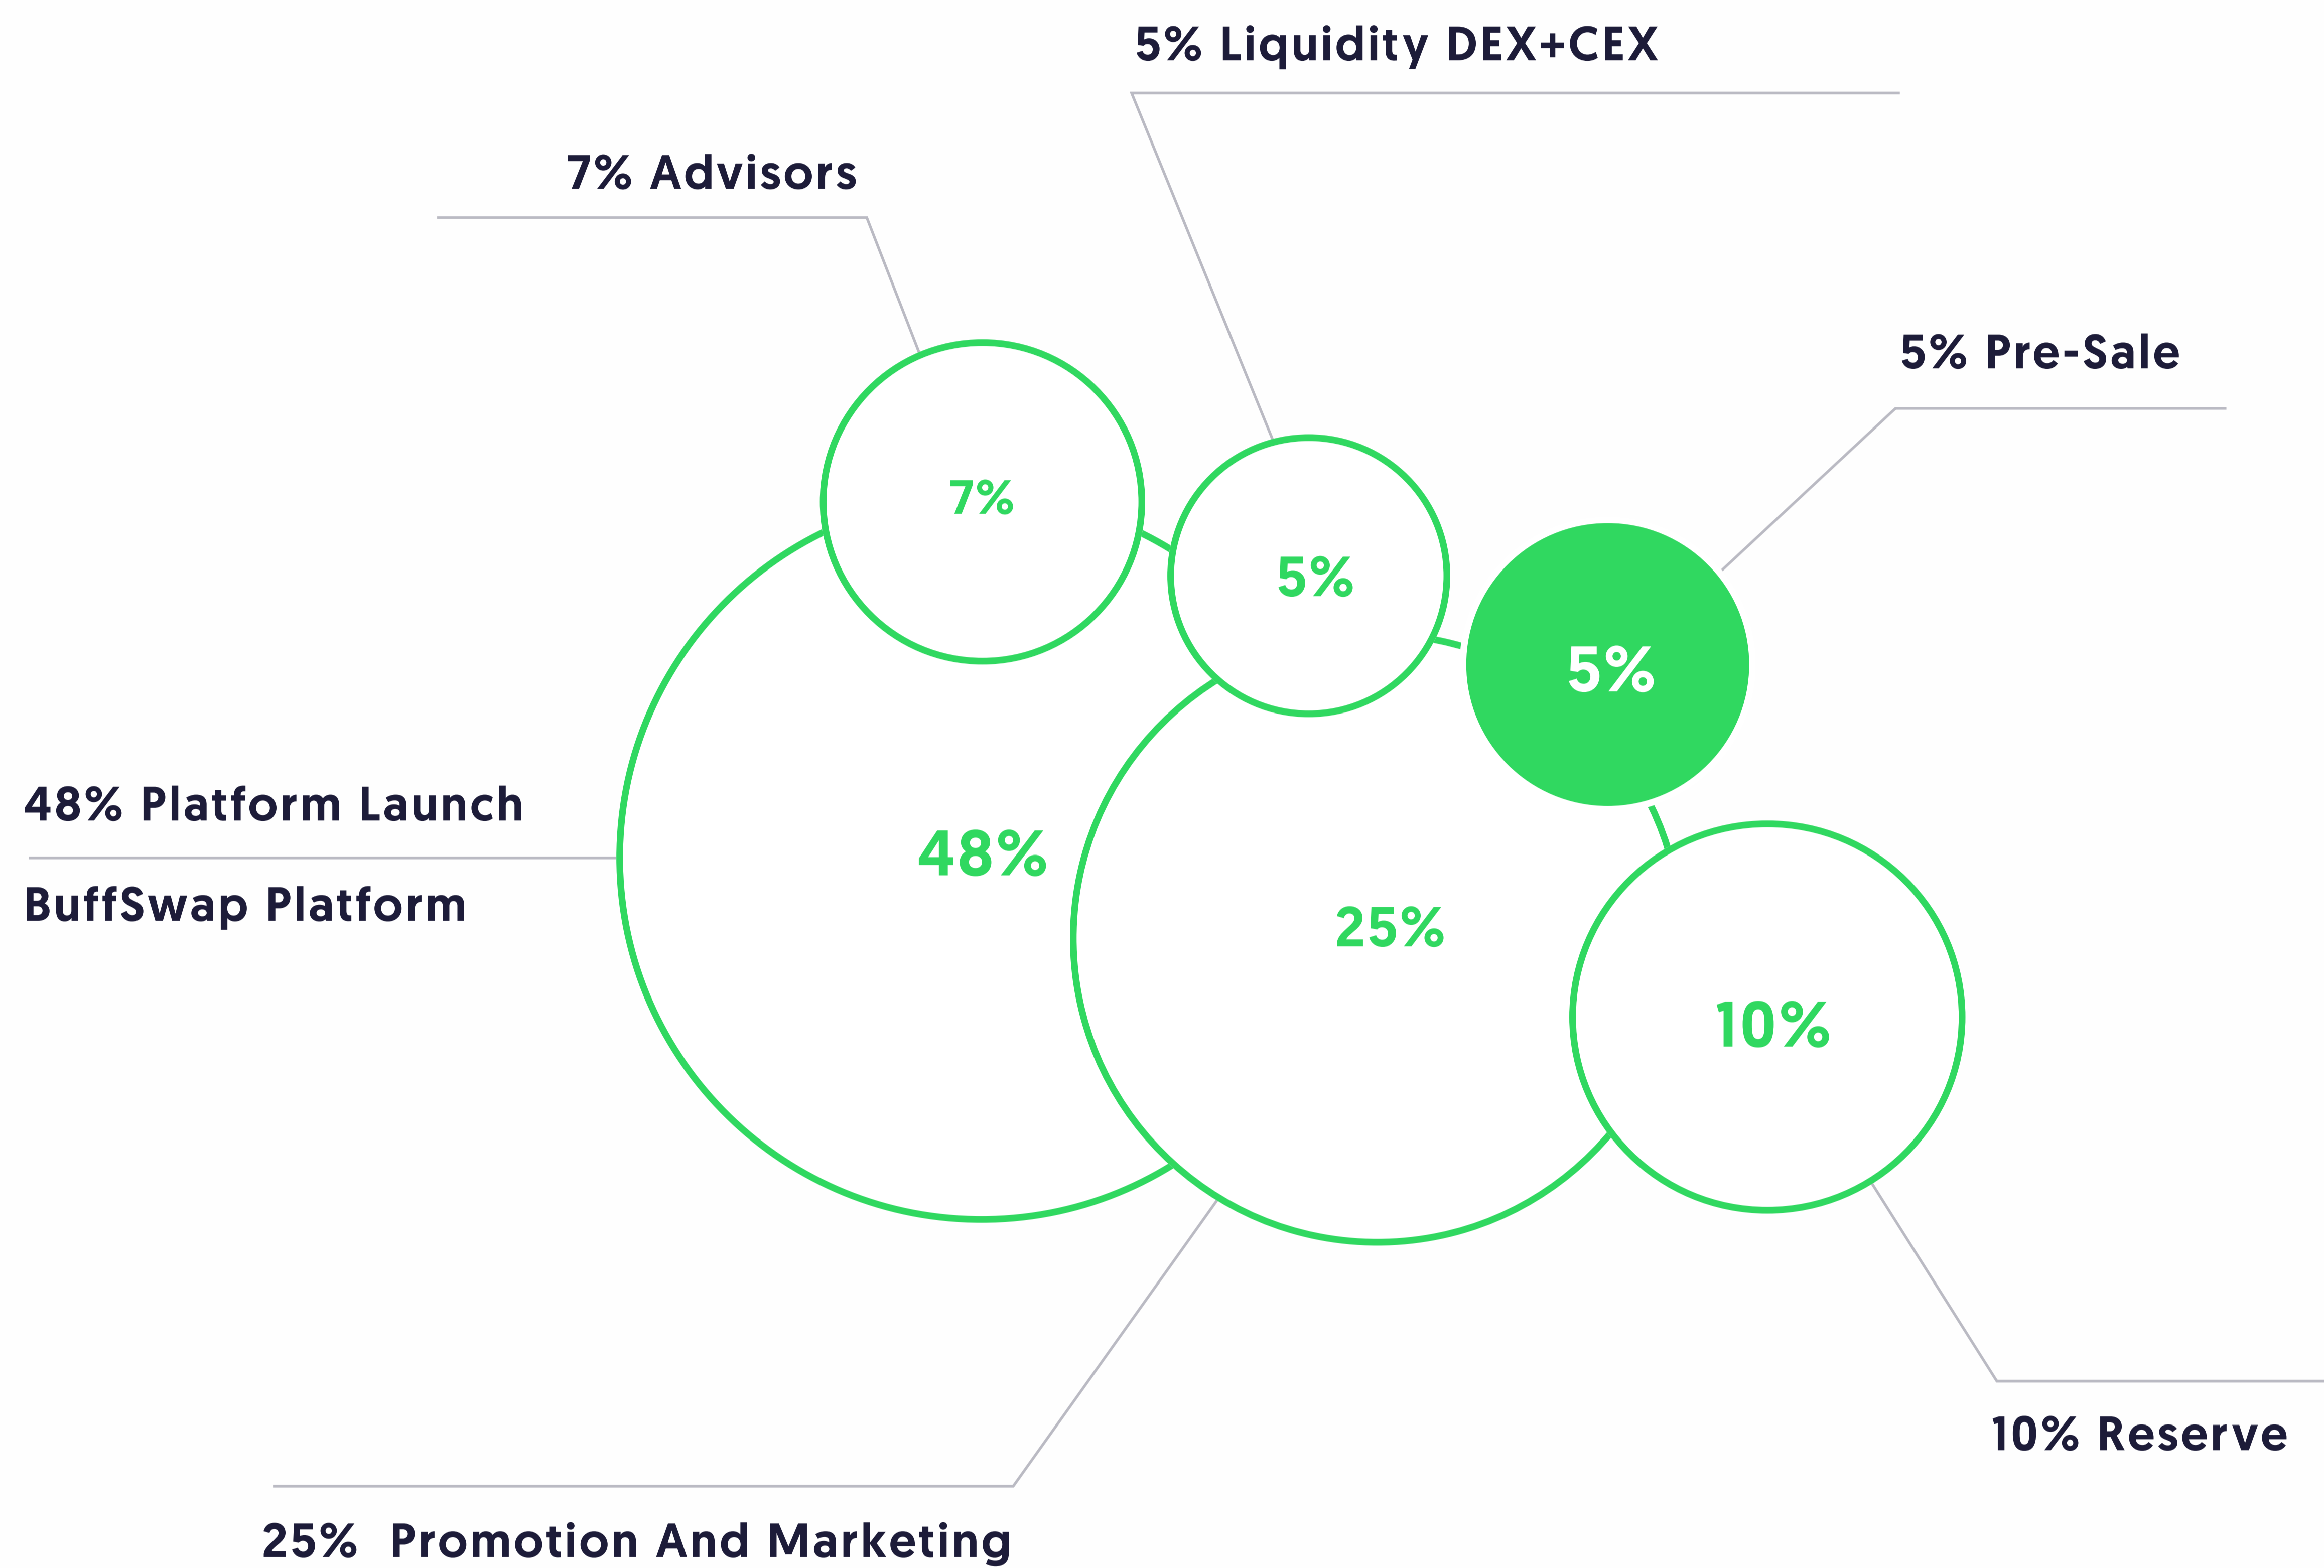

### Token Audit

Certik uses rigorous Formal Verification technology to provide hacker-resistant smart contract and blockchain audits. The BuffSwap smart contract is positively verified by Certik!

# 7. Tokenomics

## Token Distribution

## Allocation of funds

500.000 USD - adding liquidity to Pancake Swap

100% of raised funds have the aim of securing the liquidity of the "Buffs Token". In order to build liquidity, a pool will be generated on Pancake Swap. The allocated USD amount will be covered by Buffs Tokens, which will secure liquidity and minimise the risk of the token price falling.

\$BUFFS Tokens are tradable on:

## 8. Statistics

“In 2021, the global eSports market was valued at just over 1.08 billion U.S. dollars, an almost 50 percent increase from the previous year.

Additionally, the eSports industry's global market revenue was forecast to grow to as much as 1.62 billion U.S. dollars in 2024.

Asia and North America currently represent the largest eSports markets in terms of revenue, with China alone accounting for almost one fifth of the market.”

### eSports market revenue worldwide from 2019 to 2024 (in million U.S. dollars)

## 9. Conclusion

### Transparent economics of the platform

Owners of BuffSwap token can choose the “BF Swap”. This options allows investors to stake their tokens and consequently to be paid a share of the profit in proportion to their share of the pool. The profit sharing system is not only transparent and fair, but also calculated by a smart contract.

The staker himself can choose to withdraw his funds, these will be accounted for by a smart contract and will be restored to the wallet they were sent from. This is a mechanism based on the ones used by the biggest swap platforms, such as UniSwap.

In order to take part in games, players must have a registered account and at least 1000 deposited BuffSwap tokens

### Community generator

The presented profit sharing model of the platform between owners of the functional BuffSwap tokens is a GENERATOR in which each BuffSwap token owner automatically becomes an ambassador of the platform. This will eventually create a strong community and help generate organic and efficient marketing of the project.

### Service delivery process - technology

Smart contracts are the foundation of the platform, the mechanisms of service delivery and the guarantors of the transparency of our platform. These are currently being tested by the team. The staking mechanisms and the payments via smart contracts are based on the same model and system of contracts from UniSwap and Pancakeswap.

After the launch of the platform, there will be a CERTIK audit of the smart contracts, similar to one conducted on the \$BUFFS token. The technical documentation of the project will be published in Q1 2023.

### Value of the BuffSwap tokens

The presented model of token value building via staking and democratic profit sharing (each BuffSwap token generates an equal percentage in the profits) is innovative, and combined with smart contracts guarantees transparency and fairness.
